

Maria Koskolou is Associate Professor of Exercise Physiology at the National & Kapodistrian University of Athens, Department of Physical Education and Sport Science (NKUA, DPSS). She graduated from NKUA, DPSS in 1985 (BSc) and then pursued graduate studies abroad: University of British Columbia, Canada, School of Physical Education, 1991 (MSc, Thesis title: "Arterial hypoxemia and performance during intense exercise", Supervisor: Donald C. McKenzie); University of Copenhagen, Denmark, Department of Science, August Krogh Institute (Zoophysiology and Sport Biological Theory), 1998 (PhD, Thesis title: "Differential effects of low arterial oxygen tension and hemoglobin on skeletal muscle oxygen delivery and utilization during exercise in humans", Supervisor: Bengt Saltin). She teaches various undergraduate and graduate courses at NKUA, DPSS (Exercise Physiology, Ergometry, Exercise-Fitness-Health, Physical Activity & Aging, Sports Nutrition and Performance) and, also, graduate courses at the School of Health Science and Education, Harokopeio University, Greece (Master Degree in Applied Nutrition) and at the University of Granada, Spain (Master Degree in Health Sciences). She is a member of the American Physiological Society (APS) since 1999, a member of the European College of Sports Science (ECSS) and an Executive Committee member of the International Society for Environmental Ergonomics (ICEE) since 2007. She has authored 32 full papers published in International Scientific Journals (Scopus, h-index: 16) and co-authored 1 book and 2 book chapters. She has served as a reviewer in international journals: Journal of Applied Physiology, European Journal of Applied Physiology, Frontiers in Physiology, Cancer Epidemiology, Biomarkers & Prevention. She has numerous presentations in international congresses and involvement in scientific and organizing committees in international and national conferences. Her research interests focus on exercise physiology, cardiovascular and respiratory response to exercise, oxygen transport (anemia, hypoxia, apnoea, exercise-induced hypoxemia), hydration, thermoregulation and exercise performance, physical activity in the elderly, anthropometric characteristics of athletes in various sports.
