

*Perikles Simon teaches at the Johannes Gutenberg-University of Mayence (Germany) as full professor of Sports Medicine, Disease Prevention and Rehabilitation. His department provides medical care, sport medical expertise, and physiotherapy to athletes and to out- and in-patients of the Medical University Hospital. Mr. Simon's research is focusing on performance diagnostics and disease prevention including the prevention of doping in sports. He was a member of the "Gene Doping Panel" at WADA 2009-2014, and served as invited expert for the German Parliament, the Federal Ministry of Health, and the European Commission. In 2006 he filed a patent for the robust detection of transgenic DNA, which served as a blueprint for the development of a direct detection procedure for gene doping and in 2018 he filed a patent for the rapid and ultra-sensitive quantification of DNA in whole blood without the need of purification steps. Mr. Simon has studied Medicine (MD in 2000) and Neural and Behavioral Science at the International Max-Planck Research School (PhD in 2004) in Tuebingen, including laboratory rotations in Molecular Medicine and Bioengineering at the University of Pennsylvania, Philadelphia.*
